

## ABSTRACT

Ilham Wahyudin Hamzah and Serly Towalu. Data Information Systems Lecturer in the Faculty of Engineering, State University of Management Studies Program End Gorontalo. Tugas Informatika Department of Informatics Faculty of Engineering, State University of Gorontalo. This research aims at studying the Data information systems lecturer in the Faculty of Engineering, State University of Gorontalo and develop a computerized information system to handle personnel issues, especially in sub-section on Data lecturers. Lecturer data processing system still has shortcomings in the data processing as in the process when the teacher was having trouble finding the data history of education, teaching, research, service, office, etc.. So that the proposed increase in rank / position and certification of teachers, there is still difficulty in finding the data in the filing tersebut. Sehingga promotion / job title and certification of teachers, there is still difficulty in finding the data tersebut. Cara conducted in this study is to investigate the system, analyze the activities systems, designing systems with modeling system Flow Chart, data Flow diagram, database design and develop a professor of information systems data using PHP and MySQL. From the results of this study obtained an information system design, computer-based Data lecturers that can be used in conducting the data collection process so that needed information can be presented, fast, precise and accurate.
