Nenawaty Harun, NIM 153 408 310 "Meningkatkan Kecerdasan Kinestetik Anak Melalui Metode Berjalan Zig Zag Di TK Negeri Pembina Kecamatan Sipatana Kota Gorontalo", Skripsi, Fakultas Ilmu Pendidikan Program \$-1 PAUD, Universitas Negeri Gorontalo, Pembimbing I Dra. Rapi Us Djuko, M.Pd, dan Pembimbing II Meylan Saleh, M.Pd.

This is a problem in research whether thought running zig zag method can improve kinesthetic intelligence of the children in TK Negeri Pembina Kecamatan Sipatana Kota Gorontalo?.

This research was classroom action research with the research procedure consists of the preparation phase, implementation phase, observation and evaluation stage, the stage of analysis and reflection. Methods used in this study is action research methods class in order to give an overview of the increasing kinesthetic intelligence of the child in group B of TK Negeri Pembina Kecamatan Sipatana Kota Gorontalo.

Result of earlier observational studies indicate that the kinesthetic intelligence of the children is still very low. It appears on the data obtained from 30 children in group B of TK Negeri Pembina only 12 people or 40% of children who have kinesthetic intelligence and the rest have not. But after the first cycle of the action carried out the data obtained from 12 children or 40% on initial observation increased to 18 children or 60% of 30 children in cycle 1 and cycle 2 in the child reaches 27 or 90%.

Based on research results can be concluded that the method of running zig zag can improve the kinesthetic intelligence of children in group B of TK Negeri Pembina Kecamatan Sipatana Kota Gorontalo.
