

ABSTRACT

Mohamad Yusrianto Angio. Designing Web-Based Information Systems Reviewing and SMS Gateway In Madrasah Aliyah Batudaa. Final Duty Program Information Management Department of Informatics Faculty of Engineering, State University of Gorontalo.

This study aims to improve the processing of value on Aliyah madrasah Batudaa, ranging from data collection to value creation that has not been computerized report cards that take a long time for the processing of value. Ways in which this research is to conduct planning, observations, gathering data, identifying problems, analyzing and designing systems modeling system with System Flow Chart, Data Flow diagram, database design and make an Reviewing Information System Design and Web based SMS Gateway On Madrasah Aliyah Batudaa using PHP programming language and MySQL.

Based on the research, processing value at Madrasah Aliyah Batudaa not manageable with maximum so the need for a computerized, which may facilitate pengoalahan value faster and manageable with good.
