

## **BAB V**

### **KESIMPULAN DAN SARAN**

#### **5.1. Kesimpulan**

Laju akumulasi kehilangan air (APWL) terjadi mulai dasarian 20 yakni bulan Juli hingga dasarian 33 yakni bulan November. Hal ini disebabkan karena pada periode tersebut telah memasuki puncak musim kemarau yakni periode Juni, Juli, Agustus (JJA) dan masuk musim peralihan yakni periode September, Oktober, November (SON).

Koefisien penurunan ( $k_y$ ) produksi terjadi penurunan seiring akumulasi penurunan curah hujan dasarian yakni mulai bulan Agustus hingga bulan November. Periode tersebut merupakan periode peralihan dari musim kemarau (Juni, Juli, Agustus) ke musim hujan (Desember, Januari, Februari).

#### **5.2. Saran**

Berdasarkan kesimpulan diatas diharapkan para petani dapat melihat kondisi iklim sesuai daerah sekitarnya. Kondisi iklim yang tepat yaitu pada bulan September sampai bulan November guna keberlangsungan optimalisasi produktivitas tanaman kedelai
