

ABSTRACT

Sri Wahyuni Lamadau. Student's ID 911 409 025. Skripsi 2013 " The Effect of Power Point Program as Learning Media toward Student's Learning Achievement". It was supervised by Imran R. Hambali S.Pd., SE, MSA as the principal supervisor and Hj. Irawati Abdul, SE., M.Si as the co supervisor. The research aimed to measure the effect of power point program as learning media toward student's learning achievement. The research method applied quantitative method which systematically describes the effect. The research population were all students at X class of SMK Negeri 1 of Gorontalo City 2012/2013 academic year amounted 203 students and it was determined for 35 students to become the sample. Research findings showed that there is a significant effect from the use of power point program as the learning media toward student's learning achievement. It can be observed from the acceptance of research hypothesis. The use of power point program as learning media can affect low and high achievement of students. The use of power point program contributed well toward student's learning achievement amounted 17% and the remaining 82% was determined by other factors either it came from student's concern inside or outside. Thus, the use of power point program as learning media can inscrease student's learning achievement and it can deliver messages clearly to students by the teacher.
