

## **Chapter 5**

### **Conclusion and Recommendation**

#### **Conclusion**

Fast access of communication presented an opportunity for everyone to get closer to other people. Intimacy is fostered through BBM chat naturally occurring regularly without limits of time and place as occurs in an application with the help of internet access.

This form of communication offers easy sharing of information in writing or listening (audio). Easeness is presented by the sharing of information in writing and drawings or photographs, which in a few seconds can be directly shipped quickly, of course, with the support of an adequate network access.

Easeness is considered the main thing why it is so popular for people, especially for users of Blackberry. BBM is a application chat that is very simple and easy compared to other chat applications, this can be seen from so many blackberry users into a phenomenon that consists of various circles of society and the world as a BBM to make one feature most requested by users blackberry throughout the world because of the ease of access to information and communication

In addition, this study shows how the patterns of learning behaviors exhibited by the participants without involving instructors recognize the meaning of the language in the existing language. However, learning a language through the introduction of each of the vocabulary used in this application and the habits formed through repeated interactions in a long time using the same word.

Participants learn through their habit of using it in communication and interaction instead of learning through formal and informal education. As an illustration of the other results, Barriers faced seen in the use of BBM where the understanding of the language provided in the command menu is very less attention. Any language used in the application

does not provide a major influence on the meaning of language mastery. Either use English or Latin, the user does not pay attention to the meaning of language services available.

### **Recommendation**

In each study, there are many shortcomings unwittingly became a sign to the lack of efficient research, and a lack of research that consists of a variety of aspects. Some recommended investigations or researches can be conducted in the future. Future that can be recommended are studies that could compare, complement, and support previous researches. In this study, researchers have described Gorontalo Blackberry Community's perception toward menu command in Blackberry Messenger feature. Further, researcher would suggest several recommendation that could be done in the future related research that has been done, they are:

1. Research can be conducted on blackberry users who are in rural or remote areas consisting of multiple users who are in a group of BBM. The study could compare blackberry user perception of the English village in the BBM supplied entirely unfamiliar to them.
2. Survey on the use of blackberry (BBM) in a community or group that still use English. This study because it was recommended by some people who feel disturbed by the native language of blackberry and tried to replace it with Indonesian.
3. Research on users who are using blackberry with a specific reason such as using a blackberry because of the association, because people are in a lively environment using sophisticated gadgets like blackberry. This research can be recommended as a research culture.
