

CHAPTER V

CONCLUSION AND SUGGESTION

This aim of this chapter is to conclude the data that was found and discussed. The suggestion is written in order to improve teachers' knowledge about teacher method. Suggestion will be also addressed for further researcher on innovating research about teaching method.

5.1 Conclusion

Based on the data that was found and discussed, I formulated some conclusions are:

1. The silent way method will become unfamiliar method in Gorontalo if it is asked from the name. The name silent way is unknown by teachers. However, the procedure of the method has been implemented by the teachers because it helps teachers to encourage students in improving their English. So that silent way method being infamous because of the name.
2. Related to the procedure of silent way method that asserts students' role more than teachers, it can be classified as a good teaching method. It is because the goal of teaching and learning process is focused on students' ability. It is supported with teachers' perspective towards the application of silent way method itself. All teachers that were interviewed gave the positive perspective. It means that they agreed that silent way method is suitable to be applied in teaching English.

3. Silent way method is a good method based on teachers' perspective. It was proven that silent way method can give students opportunity to reveal their idea, express their feeling, and use their English in communication. Nevertheless, it could not guarantee that students understand the lesson and give correct response during teaching and learning process.

5.2 Suggestion

I formulated some suggestion both for English teachers and further researcher. Suggestion for English teachers is English teachers need for improving their ability in teaching and makes their students able to use English in their daily life. In this section I would like to give suggestions for English teachers as follows:

First, being a language teacher is not easy in order to motivate students to learn. It is because we have many characteristics of students. However, with more creativity and innovation teachers especially English teachers can transfer their knowledge and influence their students to develop their English. Second, English teachers not only need creativity but also knowledge about teaching method. It is because teaching method can help teachers in carry out their role in class as well reach the goal of teaching and learning class. Teachers should also update their knowledge about teaching method itself. It is because teaching methods are always developed day by day.

I will also give some recommendation for further research. It is because there are some aspects that I did not investigate. I did not investigate deeper about

students' perspective towards the use of silent way method. I focused only to the teachers as facilitator in teaching learning process, though students are the main role in teaching and learning process. We will know the teaching method can successfully achieve the goal of teaching and learning process from students' responses. Thus, I recommended for the further research in investigating the students' achievement when teachers applied teaching method.
