

Chapter V

Conclusion and Suggestion

This chapter explains the conclusion of the research data and suggestion for the best to improve the students' skill especially for improving the reading skill.

Conclusion

Based on the result analyzing and explanation of the previous chapter, I would like to take the conclusion of this research. The hypothesis of this research that is "the Group Investigation Technique can improve students' skill in reading" can be received. It show base of the criteria H1 will be received if $t\text{-list} < t\text{-count}$. The value of $t\text{-list} (n-1 = 24) = 2.06$. Thus, it is obtained $t\text{-count} (8.15)$ bigger than $t\text{-list} (2.06)$ it means that the research hypothesis is accepted. In other words, "The Group Investigation technique can improve the students' skill in reading."

Suggestion

for improving the students skill in teaching especially for reading skill the teacher should have the good strategy, technique, and method in order make the students not bored in the class. There were many technique offered in created a learning atmosphere which enjoyable and meaningful to the students. One technique in to improve students' skill in reading is Group Investigation.

I suggest teacher use the Group Investigation Technique for teaching reading because with Group Investigation Technique, the students can improve their social thinking and the students also can share their problem with friends in the group. Beside that with this technique the students antusiastic and enjoy in

class, because every students have the responsibility and every students should active.

Beside I suggest The Group Investigation Technique to use in teaching reading I also suggest the teacher should use this technique for teaching english subject, especially to increase student ability in learning English. And the last my suggest for the other researcher to carry Group Investigation Technique in other skill of the language.
