Cadres are being attracted the attention of public recently. The simplicity and originality from the local society make them close to anybody. This research aims at investigating the cadres' role to mothers adherence level in carrying infants to maternal and child health center in Huidu village, Limboto Barat subdistrict.

The research design was descriptive analytical by having cross sectional as an approach. There are 52 respondents were taken by using purposive sampling. Questionnaire and observation were the instruments in conducting this research.

The result of the research showed that there is relationship between cadres' role and mothers' adherence level in visiting to maternal and child health center. There are 21 of 52 respondents or 72,4% who stated that the cadres' role is less active, while 8 respondents or 27,6% who stated that the cadres' role is active. There are 9 respondents or 29,1% who are obedient in visiting to maternal and child center, while 14 respondents or 60,9% who are not obedient in visiting to maternal and child center.

Based on the results, it can be deduced that there is relationship between cadre's role and mothers' adherence level in visiting to maternal and child health center. This illustrates that, the fewer roles of cadres in maternal and child health center, the decrease the mothers' level of adherence.

Nevertheless, it is expected to cadres of maternal and child health center in Huiduto village enhance mothers motivation in terms of the importance of health education for mothers and infants. Therefore, it would increase mother's encouragement to bring their children to visit maternal and child health center.

Keywords: *Cadres Role, Mothers' Adherence Level*
