

ABSTRACT

Feronika Abdullah, 2015. *The Relationship of Family Support and the Medical Obedience of Skizofrenia Patient at Puskesmas Global Telaga, Gorontalo District*. Skripsi, Department of Nursing, Faculty of Health and Sport Sciences, Universitas Negeri Gorontalo. The principal supervisor is dr. Zuhriana K. Yusuf, M.Kes., and the co-supervisor is Ns Abd. Wahab Pakaya, S.Kep., M.M.

Skizofrenia is a syndrome that affects the brain function and causes weird thought, perception, emotion, movement, and behavior. *Skizofrenia* cannot be classified as a disease but a syndrome or a disease process involving many kinds and symptoms. The obedience is the implementation of treatments and behavior by the doctor or others. Family is the smallest unit of a community consists of the head of family and other members of family living in one same place and depending on each others. This research aims at analyzing the relationship of family support and the obedience of *Skizofrenia* patient by non-experimental method. This is a correlational research using cross sectional approach. The sample consists of 34 respondents taken by Total Sampling Technique. The instrument is by questionnaire and observation. The data is analyzed by bivariate analysis using Fisher test to analyze the relationship.

The result shows that most of the patients who have family support were 15 (44%) patients, and those who have medical obedience were 18 (53%) patients. The result of Bivariate test shows the significant relationship between family support and medical obedience with the correlational coefficient $r=76.2$. This result is expected to have useful information for family to support the patients.
