The purpose of this study was to describe students' learning activities and learning outcomes in SMA Negeri 1 Telaga Biru. This research was descriptive quantitative. The population in this study were all students of class XI IPS 2 SMAN 1 Telaga Biru in the school year 2013/2014, amounting to 88 students. Sampling of this research was done by using cluster random sampling. Classes are sampled XI IPS-2 by the number of 29 students. Data collection in this study was done by observations of student activity sheets and achievement test.

This study showed that the observation of student activity for the meeting I and III are categorized very well while the second meeting was considered good. The results obtained by studying a class XI IPS 2 student of SMA Negeri 1 Telaga Biru different there were high and some were low. However, in general already be categorized either based on the data obtained. Where the percentage of students who completed at 89.66% and the percentage of students who did not complete of 10.34%. It can be concluded that the activity of students every encounter was different, but the more active students to be active in the learning process will indirectly affect learning outcomes.

**Keywords:** Activities of students, learning outcomes.
