

Chapter V

Conclusion and Suggestion

5.1 Conclusion

Distribution of prefix in English and Bajo language were correspondent because prefix in both languages could be attached to the base form noun, verb, and adjective. Then the researcher found the prefix could not be attached to the base form adverb in English and Bajo languages.

In the function it is shown that the both languages have prefixes that could change and not change the word class. In English noun could be verb and adjective if prefix was attached to the base word. Verb could be noun and adjective, and adjective could be verb. In Bajo language, noun could be verb and adjective, verb could be noun, and adjective could be a verb.

Beside the distribution and function, similarities of English and Bajo language is in sentences both of languages have the same structure that is not changed *aku dumalang(V) ma pitta' sikeo* (saya berjalan digelap gulita), if (V) dumalang 'berjalan' attached prefix *pa-* it will change to be *aku padumalang(N) ma pitta' sikeo* (saya pejalan digelap gulita). In English *it is fair(N)*, if (N) fair attached prefix *un-* it will be *it is unfair(N)*. The researcher found in English there were some base words that could be attached with prefix and suffix : *co-* +

operate + *-ion* → *co-operation* and *kapa-* + *tintoro* (ngantuk)
+ *-ang* → *kapatintoroang* (selalu ngantuk).

5.2 Suggestion

Based on conclusion above, the researcher wanted to give some suggestions. As follows:

- a. The researcher hoped that this research could be reference by subsequent researchers who are interested to do research that related with this research.
- b. The researcher hoped this research will give information for reader how to do research about contrastive analysis of prefix between English and Bajo language.
- c. The researcher hoped this research is one of ways of language maintenance for native speakers.
