"The Influence of School's Environment toward the Students' Learning Motivation at Public Junior High School SMP Negeri V Wonosari of Boalemo District, Gorontalo Province." Principal Supervisor was Prof. Dr. Hj. Asna Aneta, M.Si and Co-supervisor was Hj. Irawati Abdul, SE, M.Si.**

This research was designed to find out to what extent the school's environment influenced the students' learning motivation at SMP Negeri V Wonosari of Boalemo district, Gorontalo Province.

This research used quantitative method, to systematically describe the influence between school's environment and students' learning motivation. The population of this research were 150 students distributed in 3 classes and the samples of this research were 30 students. Additionally the research result gained regression equation and hypothesis  $\hat{Y} = 25.42 + 0.54x$ , which meant that each increase of one unit of variable X (school Environment), it will be followed by the change of variable Y (Students' Learning Motivation) as 0.54 with the assumption that the two variables were linear and significant.

The research result showed that there was significant influence of school environment toward students' learning motivation. This can be seen from the acceptance of research hypothesis which stated that the school environment influenced the students' learning motivation at SMP Negeri V Wonosari of Boalemo district, Gorontalo Province. This research showed that as 28.09% of school environment influenced over the students learning motivation, and the rest were influenced by other variables that were not desigend in this research. Therefore, this research was acceptable.

**Keywords: *School Environment, Students' Learning Motivation***
