### **ABSTRACT**

*The greater number of majors at Vocational High Schools makes students are difficult to determine the major they will enroll. There are so many things that should be considered in choosing major. This is caused by students have no idea about their interest, talent and ability. Therefore, many students in determining their major is only based on parents' decision or just following their friends. This research aims at creating the decision supporting system in determining majors and graduation. This research applies Profile Matching Method. The research result shows that the decision supporting system in determining majors and graduation can help and facilitate the school in determining majors and graduation for students' candidate. Moreover, this becomes more objective.*

**Keywords:** *decision supporting system, profile matching method*
