ABSTRACT

Decision support system is one of alternatives that is used in decision making process. In determining livable house recipient there are some manual assessments issues which are not measureable or even tend to be subjective. One of the examples is in determining livable house in Social Service and Labor Department of Gorontalo City. Uncertainty and imperfection of information, variety of selection criteria and decision making which is more than one option in determining livable house recipients are the problems faced. Based on these problems thus decision support system is created as an alternative in assisting the decision making the livable house recipient process in order to assist the allocation process. This application is created to show AHP method which is used in decision making could produce objective decision which will facilitate the decision maker (Social Service and Labor Department of Gorontalo City) in making a decision.

Keywords: Decision Support System, Livable House, AHP
