

CHAPTER V

CONCLUSION & SUGGESTION

Conclusion

This part provides the final point as the conclusion of this research, “A survey on the students’ assignment by using social network in learning English”, with 50 Students as participants and conducted in Faculty of Letters and Culture of State University of Gorontalo. The result showed that Internet is now becoming one of the most valuable things for the students and it’s not only affect the social life and communication, but it also affects the education, its shows by the use of social network as a tool to submit assignment and as a communication media for teachers and students. There are so many social network that can be use as the tools, For instance; E-mail, Facebook, YouTube, Blogger, Twitter, and BBM, but the result of this study showed that E-mail and Facebook is the most used social network to submit the assignment. In order to access social network, there is no need to use computer or laptop, students can only use a mobile phone with the feature that offer internet connection, which is smartphone.

This study showed that there is none of the student in the second semseter of English departement in State University of Gorontalo who does not own asmartphone. The large number of Smartphone user is as large as the internet user; means that the students who use Smartphone are 100% become internet user. It proves that internet is now become students’ daily need, because students can access anything using internet and students also use social network as a tool to keep in touch with peers. As for the E-mail itself, is one of the useful and effective tools in the assignment due

Suggestion

In this part, the researcher will give some suggestions to be considered by English lecturers and English students: first one is submitting assignment via online can be consider as a good decision to make seeing almost all the students are now using internet to communicate and interact with people. The second one is social network is one of the favorite features for the internet user, lecturer and teacher can use social network to interact with the students or even use social network to submit students' assignment, but not the entire social network is common for the students to use.

Third, the use of social network as a tool to submit assignment is reducing the use of paper. The fourth is another way to prevent the lost connection while sending assignment via online, the lecturer or teacher can only accept the assignment in hardcopy via flash disk. The fifth suggestion is even though social network is the most used tool to communicate; people shouldn't stop to interact face to face with others, because it will affect the social life.

The researcher realizes that this research still have some limitations, for instance; the least range of rich data from the semistructured interview and only one point of view from the participants, because it will be better if the lecturer includes as the participants. Hoped that this research will be a good reference for the other researchers with the similar case, therefore the researcher would like to accept any constructive suggestion to make this research better.
