

## Chapter V : Conclusion and suggestion

### Conclusion

This chapter presents conclusions and suggestions from this study

Based on the results of the pre-test and posttest students can be concluded that the ability of students to write text can be used through mnemonic applications with model types or model mnemonic. The research that uses colored cards as a medium to help students remember this simple sentence formula is help enough to make students improve students' memory. Based on the hypothesis criteria that  $H_0$  will be rejected if  $t_{count} < t_{list}$ , While  $H_1$  will be received if  $t_{count} > t_{list}$ . the result of this research is that the student's ability in producing simple English sentences increased after treatment. After calculating the data,  $H_1$  is accepted because  $(0,1204 < 0,234)$ .

### Suggestion

the development and application of mnemonic techniques are require good collaboration between the instructor and the student. The learning process will be more effective if there is a feedback between student and teacher (two-way communication). Therefore, researchers have few points to urge some parties or event to influence who was influenced in this study going forward. The points are:

In the results of this study indicate that the level of closeness between students and teachers is determines. The technical of mnemonic application requires the real and diverse cases as examples in our daily lives. Therefore, to encourage students in remembering sentence patterns by using mnemonic technique is; the teacher must be clever to provide examples and cases that can be accepted by students without having to imagine it.

In applying mnemonic techniques, as teacher instructors should make it more attractive.

Because it is needed, the steps included in the teaching mimic movement and the teacher's attitude and creativity to make the learning process successful, the smart and creative teacher will be useful to create a good classroom atmosphere. Meanwhile, the process will be more effective.

there are no perfect methods, techniques and Medias in learning process. This research maybe successful by using grammar methods, mnemonic techniques and rainbow cards as media. But, it does not mean that everyone can use the same way and get the same result. That is why as the researchers, it is appeal to the reader or the next researcher to observe, to read more and to find methods, techniques and other learning Medias in various way.
