ABSTRACT

Miranto Aridi. 2021. Analysis of Beef Cattle Farming Characteristics in Randangan District, Pohuwato Regency. Supervised by La Ode Sahara as Supervisor I and Nibras Karnain Laya as Supervisor II.

This study aims to determine the characteristics of breeders and beef cattle population in Randangan District, Pohuwato Regency. This research is descriptive research. Primary data collected were analyzed by quantitative descriptive analysis, and secondary data were analyzed by analysis of distribution, growth, and population density. The results showed that the age of beef cattle breeders in Randangan District was 53.85% under the age of 40 years. This shows that most of the existing breeders are included in the productive age category. The last education was elementary school at 58.24%, experience in raising livestock was <5 at 60.43%, ownership of 1-2 animals was 69.23% with a full cage rearing system at 45.05%. Based on the structure and distribution of beef cattle in the Livestock Unit in Randangan District, the largest population is found in Manunggal Karya Village, namely 1,394 ST. The growth rate of beef cattle in Randangan District in the last three years, which is an average of 5.43%. Based on the area density value of beef cattle population in Randangan sub-district, there are four villages with very dense criteria and two villages with rare criteria. The economic density value of beef cattle population shows that there are five villages with very dense criteria and one village with rare criteria. The non-transmigration villages which are the Priority Areas for beef cattle development are Ayula and Patuhu, while the transmigration villages which are the Priority Areas are Sari Murni and Sidorukun.

Keywords: Characteristics, Livestock, Beef Cattle
