

Chapter 5. Conclusion

This chapter draws conclusions based on the results of data analysis by the researcher. This chapter describes the results and recommendations for future researcher who will conduct research on a similar topic.

Summary

The nature of language can change with the changing times, therefore the situation experienced by people is one of the reasons for the development of language. This condition is then termed as register. Activities and professions are conditions that allow register to occur. Different situations or activities that owned by some people can also make them have different registers.

After compiling the data using Biber & Conrad's theory of three register components, the researcher found several important results. Each aspect has its own uniqueness, such as Linguistic Features and Meaning and the use of Register in COVID-19. By using several articles that have been mentioned in chapter 3, the researcher was greatly helped in the preparation of this research. Researcher also used a dictionary as a mediato help researcher in explaining each of the data.

All the data above has been analyzed by using the Dicourse analysis approach. The data is analyzed by using the capabilities of the researcher as a student of English Department and the support explanation by Cambridge Dictionary.

Recommendation

Researcher hope that with this research, it can help the readers to find out what registers in COVID-19 and know the use of the registers, so misuse of this register can be avoided. The next suggestion can be explained as:

For English Students

By reading this research, students can understand the explanation of registers that used in COVID-19 pandemic. Students also need to understand the discussion of sociolinguistics, which is a study that examines registers.

For Further Research

For further researchers who want to research on registers, they must first understand sociolinguistics because registers are one of the sociolinguistic studies. This research can be used as an example of a register case related to the situation that is being experienced by people. The situation that is meant is the COVID-19 pandemic. For the next researcher that will conduct a research with the similar topic as this research can try to add more idea about registers and fill the discussion which are still incompletely discussed by researcher. Researcher expects the further researcher can be motivated to create the new topic related to register after read this undergraduate thesis.
