

ABSTRACT

Delvian Hasan. 211 407030. "The Relationship between Learning Management and Students' Learning Motivation. (A Study at SMP Negeri 2 Telaga, Gorontalo District). Economic Education Study Program, Economic Education Department. Faculty of Economy and Business. State University of Gorontalo. Supervisor: Dra. Irina Popoi, S.Pd, M.Pd and Supardi Nani, SE, M.Si.

This research is conducted based on research problem: Is there a relationship between learning management and students' learning motivation at SMP Negeri 2 Telaga?

This research uses qualitative method with the relationship between X variable (Learning management) and Y Variable (Students' Learning Motivation) as its design. This research uses 30 people as research sample and simple regression test as data analysis technique.

Research result shows that the hypothesis "There Is A Relationship Between Learning Management and Students' Learning Motivation at SMP Negeri 2 Telaga" is accepted. It means that there is a positive relationship between learning management and students' learning motivation. It can be proved by statistical analysis and determinism coefficient $r^2 = 0,5695$ or 56,95%. It shows that 56,95% of students' learning motivation is determined by Learning management, meanwhile 43,05% is related with other variables. The distribution list on real standard is 5% ($\alpha = 0,05$) and $t_{list} = 2,05$. The calculation result shows that t_{count} is bigger than t_{count} ($2,75 \geq 2,05$) or the value of t_{count} is outside of H_0 so that the correlation is definitely significant.

Key words: *Learning Management, Students' Learning Motivation*
