## ABSTRACT

**Sinyin Dalila. "614413096". 2017. Analysis of Income Inequality of Corn Farming Business in Sub-district of Pulubala, District of Gorontalo. Department of Agribusiness, Faculty of Agriculture, State University of Gorontalo. Principal supervisor is Mahludin H. Baruwadi and Co-supervisor is Irwan Bempah.**

This research aims to analyze: 1) income inequality of corn farmers in Sub-district of Pulubala, District of Gorontalo, 2) income not from corn farming business at income inequality of corn farmers in Sub-district of Pulubala, District of Gorontalo. This research is conducted in four villages in Sub-district of Pulubala, District of Gorontalo and it is started from August to November 2017. This is a survey method in which its data are obtained through interview and observation. Samples of the research are 50 people determined by using simple random sampling which means samples are taken randomly from all population which is 100 people in Sub-district of Pulubala, District of Gorontalo. Data of this research are both primary and secondary data. The obtained data are analyzed by using Gini Ratio number formula. Research findings reveal that : 1) income of corn farmer in Sub-district of Pulubala, District of Gorontalo which only derives from corn farming business is in low inequality category for 0,173 or  $< 0,3$ . 2) Other incomes not from corn farming business influences income of corn farmers' household inequality trend as it decreases. This can be seen from number of Gini Ratio that is obtained from all farming business namely 0,167 while the Gini Ratio for all income of farmers' household is 0,161.

***Keywords: Corn Farming Business, Income Inequality***

### **ABSTRAK**

Penelitian ini bertujuan untuk menganalisis : 1) Menganalisis ketimpangan pendapatan yang terjadi pada petani jagung di Kecamatan Pulubala Kabupaten Gorontalo, 2) Untuk menganalisis pendapatan di luar usahatani jagung pada ketimpangan pendapatan petani jagung di Kecamatan Pulubala Kabupaten Gorontalo. Penelitian ini dilaksanakan di empat Desa yang menjadi wilayah pengamatan di Kecamatan Pulubala Kabupaten Gorontalo dari bulan Agustus sampai dengan bulan November Tahun 2017. Metode yang digunakan adalah metode survei yaitu pengumpulan data berdasarkan wawancara dan observasi. Teknik pengambilan sampel dilakukan dengan menggunakan metode *simple random sampling*, yaitu pengambilan secara acak dari seluruh populasi yang berlokasi di Kecamatan Pulubala Kabupaten Gorontalo dimana dalam penelitian ini populasi terdiri dari 100 orang petani responden dan diambil kelipatan 2 sehingga didapatkan sampel sebanyak 50 orang. Jenis dan sumber data yang digunakan dalam penelitian ini yaitu data primer dan data sekunder. Analisis data yang digunakan untuk menghitung tingkat ketimpangan pendapatan menggunakan rumus angka Gini Rasio. Hasil penelitian menunjukkan bahwa: 1) Pendapatan petani jagung di Kecamatan Pulubala yang bersumber dari usahatani jagung saja berada dalam kategori timpang rendah yaitu 0,173 atau  $< 0,3$ . 2) Pendapatan lain diluar usahatani jagung berpengaruh pada kecenderungan ketimpangan pendapatan rumah tangga petani dimana terjadi penurunan ketimpangan pendapatan. Hal ini dapat dilihat dari angka Gini Rasio yang di dapatkan dari pendapatan semua usahatani yaitu sebesar Gini Rasio = 0,167 dan untuk nilai Gini Rasio seluruh pendapatan Rumah Tangga Petani sebesar Gini Rasio = 0,161.
